# **Evaluating Feature-Specific Similarity** Metrics using Human Judgments for Norwegian News Media

### Daniel Rosnes

Supervisors: Christoph Trattner and Alain D. Starke

**Futures** amedia Schibsted

This master's thesis delves into the measurement of similarity between news articles within the Norwegian news domain. Four central questions form the basis of the thesis: the identification of information cues utilized by readers, the effectiveness of specific similarity metrics, the comparison with other domains, and the exploration of differences in human similarity ratings between national and local news.

## Research questions

**RQ1**: Which specific features do Norwegian users use to evaluate the similarity between news articles?

RQ2: To what extent do feature-specific similarity metrics represent human similarity judgments in the Norwegian news domain?

**RQ3**: How do the feature-specific metric representations in the Norwegian news domain compare with feature-specific metric representations in other domains?

**RQ4.1**: Does the strength of human similarity judgments towards Norwegian news media differ across local and national outlets?

**RQ4.2**: To what extent do feature-specific similarity functions represent human judgment across local and national Norwegian news media outlets?

Key findings include that a Sentence-BERT metric, applied to the body text, best represented human similarity judgments. Compared to other news domains, the Norwegian news domain showed stronger correlations for a majority of the metrics.

A minimal contrast was observed between human ratings for local and national news, with local news considered slightly more similar. This disparity between local and national levels, however, did not markedly impact how metrics represented human similarity judgments. The findings from this thesis may provide valuable insights for enhancing news recommendation systems within the news sector.

# Methodology

Four datasets were generated from two MediaFutures partners: Amedia and Schibsted. The datasets represented all articles published online in 2022 from BA, BT, VG and Nettavisen. Within each dataset, similarity was calculated using 25 different Feature-Specific Similarity Metrics.

For the survey, the similarity scores were normalized and combined and pairs were generated from the combined similarity scores. These pairs were split into 5 groups based on their similarity. 141 participants were recruited through social media, and then asked to rate the similarity of 10 news article pairs on a 5-point Likert scale. Each user rated 5 pairs from a local publication and 5 pairs from a national publication. From each publication, 1 pair was from each of the similarity groups. Finally, each user was asked to report which feature they used to evalute the similarity.

Correlations were calculated for each of the 25 Feature-Specific Similarity Ratings against the Human Similiarity Judgements. In additon a t-test was performed to evalute differences in

≺esi

similarity ratings accross Local and National publications. Finally, the correlations were evaluted accross the Local and National news domains using a z-test.

- Text and Section highest reported cue usage
- Text:SBERT highest correlating Feature-Specific Similarity Feature, followed by Section: JACC
- Minor differences in similarity ratings across nows

(Barcelona - Real Madrid 2-3) Vidunderbarnet Vinicius Junior (21) og veteranen Karim Benzema (34) har flere scoringer enn hele Barcelonastallen til sammen denne sesongen. I kveld nedsablet de erkerivalen for femte gang på rad. Men det måtte ekstraomganger og hjelp fra en lagkamerat til.

Vi må tilbake til 1965 for å finne en lignende seiersrekke fordel Real Madrid mot Barcelona. Kveldens seier sørget for at hovedstadslaget er finaleklare i den spanske supercupen.

Og mens Benzema noterte seg for sin 23. scoring denne sesongen, var kampens første mål Vinicius Juniors 15. nettkjenning. Totalen på 39 mål utklasser hele Barcelona-stallen, som til sammen står med 37 nettkjenninger i alle turneringer denne sesongen.

Utligninger av Luuk de Jong og Ansu Fati sørget imidlertid for Luck de Jong og Hind rod skiget inter i transfer i tran

Her aksjonerer de mot at Bergensbanen settes på vent: – Det haster
Emneknagger: Jembane, Tog, Samferdsel, Bergen, Oslo, Vy

7. november 2022 07:33

Mandag morgen ble det aksjonert på jernbanestasjonen i Bergen.

Rundt 90 personer møtte opp for å aksjonere mot at Bergensbanen blir satt på vent i statsbudsjettet. Turen gikk til Oslo for å markere misnøye på Stortinget.

– Vi har ventet på dette i de over 100 årene siden banen ble bygget. Vi trenger dette, sier Atle Kvamme i Bergen Næringsråd om den nye jernbanen.

Han mener oppmøtet viser at det er stort engasjement for E16 og Vossebanen Arna-Stanghelle.

Intetanende morgenpassasjerer fikk seg nok et sjokk da lyden av buekorps møtte dem inne på stasjonen. Med høyttalere og til stor applaus holdt flere appeller, deriblant Bernt Sverre Mehammer i It's tomorrow AS.

Two news articles as they were shown in the survey
